

Devon Nathan

Lead Hands-on Blockchain Solutions Architect (EVM/Tezos) devonnathan.com | devon.nathan@protonmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Full-stack blockchain engineer with 6+ years delivering production-grade, multi-chain (EVM/Tezos) systems. Strengths in end-to-end delivery across applications, crypto dapps, integrations, monitoring/incident response, and cloud (GCP).

Key Highlights

- Cross-chain bridge UI + integrations supporting **>\$55M** bridged volume (Tezos ↔ EVM)
 - Provisioned **Tezos L1 + Etherlink EVM** stack on **OVH bare-metal**; automated provisioning with **Ansible** and **Docker**
 - Engineered a **distributed load-testing framework** in Python/Locust capable of simulating **3000+ RPS** with real-time metric aggregation
 - Implemented **fast withdrawals**, reducing withdrawal time by **~2 weeks** (Etherlink L2 → Tezos L1)
 - Governance UI + indexing system supporting **>\$30M** voting power
-

Work Experience

Lead Hands-on Blockchain Solutions Architect | Trilitech | 2024 - Present | etherlink.com

- **Software Development & Engineering:**
 - **Engineered and sustained the production UI and integrations** for the high-volume cross-chain bridge (bridge.etherlink.com) supporting **>\$55M** across Tezos and EVM.
 - **Co-built Tezos Intents**, a cross-chain intent settlement platform (MPC threshold signing, ERC-4337 smart accounts, treasury pipeline); led architecture, integration, and test strategy across contracts, off-chain services, and UI. Sole maintainer.
 - **Architected the off-chain execution services and UI flow for fast-withdrawals**; advised on L2 contract design to reduce L2-to-L1 bridge latency by **~2 weeks**.
 - **Standardized the frontend and indexing architecture** for Tezos governance (governance.etherlink.com) supporting **>\$30M** voting power.
 - **Designed and maintained automated liquidity dashboards** to monitor EVM/Tezos bridge health via real-time data pipelines.
 - **Mentored junior engineers**; supported delivery of bridge.explorer.etherlink.com
- **DevOps & Infrastructure Architecture:**
 - **Orchestrated monitoring and incident response** across dapp availability, node clusters, and RPC health using **PagerDuty, Grafana, and Prometheus**.
 - **Designed an AI-assisted alert triage system** — Slack-triggered investigation across Kubernetes and GCP logs, posts automated root-cause replies in Slack alert threads, and automated remediation via pull requests.

- **Provisioned multi-region EVM node clusters on Kubernetes** to support upcoming commercial RPC services.
- **Provisioned production blockchain stack on dedicated OVH bare-metal servers** — Tezos L1, Etherlink EVM, API, and indexers; optimized **4TB NVMe RAID 0** for high-IOPS indexing and authored **Fast Restore** automation for **1.2TB+** snapshots.
- **Infrastructure as Code:** Automated server provisioning and software stack using **Ansible** and **Docker Compose**.
- **Distributed Performance Engineering:** Engineered a custom **Python/Locust** load-testing framework; benchmarked RPC throughput at **3000+ RPS** with real-time metric aggregation.

Solidity Developer | Level 77 - Blowfish Studios | 2022 - 2024 | phantomgalaxies.com

- Sole Solidity developer for a game with **60,000 players**, **500,000 NFT owners**, and **1700 ETH (6.5M USD)** trading volume
- Shipped **upgradeable smart contracts** (transparent proxy pattern), staking/rewards, and timelocks
- Implemented a **LayerZero** token bridge for **Astrafer** ([Polygon](#) → [Ethereum](#))
- Production Polygon **NFT contract** with **12,000+ on-chain transactions** ([contract](#))
- Built **dynamic NFT images** with game updates and **EC2** → **S3** rendering pipeline (*JavaScript, AWS*)
- Integrated on-chain features with React/Express and Unity (C#)
- Built automated TypeScript pipelines for cross-chain smart contract deployments and upgrades, ensuring seamless multi-network releases

Early Career Blockchain & Web Development | 2020 - 2022 — NFT marketplaces, crowdfunding platforms, and dapps for **Panda Siege** and **Crypto Fund Me** (*Next.js, Solidity, IPFS*).

Skills & Stack

- **Languages:** JavaScript/TypeScript (Node, React, Next, Vue), Python (Locust, Keras, Scikit-Learn), Solidity
- **Cloud & DevOps:** **GCP (Run, Build, Storage, BigQuery, VM)**, Kubernetes, Ansible, Docker, Prometheus
- **Specialization:** Cross-chain bridge architecture, high-IOPS indexing, bare-metal node provisioning, CI/CD

Own Projects

- **Quant Research Platform** (side project) — End-to-end crypto quant stack: historical research & backtesting, walk-forward validation, strategy promotion, and live execution on Binance. Monorepo with **Python/FastAPI**, **React/Vue** dashboards, **Postgres**, **Docker**, and **Ansible**-deployed infra.

Education

Double Degree: Bachelor of Business (Marketing) & Bachelor of Arts (Philosophy) Macquarie University, Sydney
