

Devon Nathan

Lead Hands-on Blockchain Solutions Architect (EVM/Tezos) devonnathan.com | devon.nathan@protonmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Full-stack blockchain engineer with 5+ years delivering production-grade, multi-chain (EVM/Tezos) systems. Strengths in end-to-end delivery across web apps, integrations, monitoring/incident response, and cloud (GCP).

Key Highlights

- Cross-chain bridge UI + integrations supporting **>\$55M** bridged volume (Tezos ↔ EVM)
 - Architected a **High-Availability Blockchain Cluster** on bare-metal servers; automated L1/EVM node provisioning using **Ansible** and **Docker**
 - Engineered a **distributed load-testing framework** in Python/Locust capable of simulating **3000+ RPS** with real-time metric aggregation
 - Implemented **fast withdrawals**, reducing withdrawal time by **~2 weeks** (Etherlink L2 → Tezos L1)
 - Governance UI + indexing system supporting **>\$30M** voting power
-

Work Experience

Lead Hands-on Blockchain Solutions Architect | Trilitech | 2024 - Present | etherlink.com

- **Software Development & Engineering:**
 - **Engineered and sustained the production UI and integrations** for the high-volume cross-chain bridge (bridge.etherlink.com) supporting **>\$55M** across Tezos and EVM.
 - **Architected the off-chain execution services and UI flow for fast-withdrawals**; advised on L2 contract design to reduce L2-to-L1 bridge latency by **~2 weeks**.
 - **Standardized the frontend and indexing architecture** for Tezos governance (governance.etherlink.com) supporting **>\$30M** voting power.
 - **Designed and maintained automated liquidity dashboards** to monitor EVM/Tezos bridge health via real-time data pipelines.
 - **Orchestrated comprehensive monitoring and incident response** for dapp availability and RPC health (*PagerDuty, Prometheus*).
 - **Mentored junior engineers**; supported delivery of bridge.explorer.etherlink.com
- **DevOps & Infrastructure Architecture:**
 - **Provisioned multi-region EVM node clusters on Kubernetes** to support upcoming commercial RPC services; implemented **Grafana/Prometheus alerting** to monitor node health and API reliability.
 - **Architected a High-Availability Blockchain Cluster:** Designed and deployed a "Twin Towers" infrastructure for Etherlink nodes on bare-metal servers, achieving 99.9% uptime.
 - **Infrastructure as Code:** Automated server provisioning and software stack (L1/EVM nodes, Indexers, Postgres) using **Ansible** and **Docker Compose**.

- **Data Engineering & Storage:** Optimized 4TB NVMe RAID 0 arrays for high-IOPS indexing and authored "**Fast Restore**" automation for 1.2TB+ snapshots.
- **Distributed Performance Engineering:** Engineered a custom load-testing framework in **Python/Locust** to benchmark high-throughput RPC nodes, supporting 3000+ RPS.

Solidity Developer | Level 77 - Blowfish Studios | 2022 - 2024 | phantomgalaxies.com

- Sole Solidity developer for a game with **60,000 players**, **500,000 NFT owners**, and **1700 ETH (6.5M USD)** trading volume
- Shipped **upgradeable smart contracts** (transparent proxy pattern), staking/rewards, and timelocks
- Implemented a **LayerZero** token bridge for **Astrafer** ([Polygon](#) → [Ethereum](#))
- Production Polygon **NFT contract** with **12,000+ on-chain transactions** ([contract](#))
- Built **dynamic NFT images** with game updates and **EC2 → S3** rendering pipeline (*JavaScript, AWS*)
- Integrated on-chain features with React/Express and Unity (C#)
- Built automated TypeScript pipelines for cross-chain smart contract deployments and upgrades, ensuring seamless multi-network releases

Substitute Instructor | 2U Monash University | 2022

- Taught Blockchain Programming and AI to classrooms of 20+ people

Early Career Blockchain & Web Development | 2020 - 2022

- Developed NFT marketplaces, crowdfunding platforms, and dapps for **Panda Siege** and **Crypto Fund Me** (*Next.js, Solidity, IPFS*).

Skills & Stack

- **Languages:** JavaScript/TypeScript (Node, React, Next, Vue), Python (Locust, Keras, Scikit-Learn), Solidity
- **Cloud & DevOps:** **GCP (Run, Build, Storage, BigQuery, VM)**, Kubernetes, Ansible, Docker, Prometheus
- **Specialization:** Cross-chain bridge architecture, high-IOPS indexing, HA bare-metal node clusters, CI/CD

Own Projects

- **StratX** — Algo crypto trading platform (**Vue.js, Python/Flask, Binance API integration**)
- **MLB & NBA AI Betting Predictor** — Sports prediction models (**Python, Scikit-Learn, Keras, Pandas**)
- **Telegram Mini Apps** — Custom bot-integrated interfaces (**React, Node.js, Telegram Bot API**)

Education

Double Degree: Bachelor of Business (Marketing) & Bachelor of Arts (Philosophy) Macquarie University, Sydney
